

FROM SLOGANS TO REALITY!

A road map to make strategic goals a reality in the transport and urban environment sectors.

PROBLEM

Typically, the strategic and political decisions of a municipality or a city often do not coincide with measures at the operational level. As a result, strategies and programmes are not put into practice. This is often due to a lack of leadership, cooperation, external and internal interaction and the sharing and use of information.

SOLUTION

The road map work identifies the current situation and the current pain points and bottlenecks to achieve the strategic and policy objectives of the urban environment. It identifies the concrete needs for change in day-to-day work tasks, resource allocation, management systems, policies and practices, and their monitoring.
